Polygon Group to Refocus on Drying and Temporary Climate Solutions

The pioneering company will hone in on the core technologies, services and markets that it knows best

Andover, Mass. (May 7, 2015) — Polygon Group (Polygon), the original pioneer in drying technology and innovation in engineered temporary climate solutions, is refining its expertise with a renewed focus on what it has always done best: complex dehumidification and climate control solutions. Doing so confirms Polygon's commitment to provide its customers with an enhanced line of services that set the standard for excellence across the entire industry.

"More than 60 years ago, Polygon established the use of desiccant dehumidification technology that really changed the game in the world of drying services and temporary climate solutions," said Mark Murphy, Country President of Polygon Group US. "Today, we're more committed than ever to putting our pioneering expertise in the industry to work for our customers. As we hone in on our core specialties, those customers are going to benefit from that even more."

As part of its streamlining initiative, Polygon will continue to offer its drying services and engineered temporary climate solutions, which have been used in thousands of different applications, including situations requiring incredibly complex approaches. With those areas a top focus for Polygon, the company will no longer directly serve the property damage restoration marketplace. It will, however, continue to serve contractors in the space with an enhanced line of Emergency Drying Services. The refocus will result in a streamlined organizational structure, though Murphy noted that Polygon's employees will benefit from the company's more specific approach going forward.

"All of our people are experts in the areas of drying technology and temporary climate solutions," he said, "so this realignment will really allow them to execute the skills that they're known for without being stretched into other areas. I think they'll also see some welcome improvements in the balance between their work lives and the time they spend with friends and family."

With Commitment Comes Change

Polygon's commitment to its core capabilities means that it will be even more focused on providing the best drying and climate solutions to all of its customers, both longtime clients and those new to Polygon. Murphy said the entire initiative will not only strengthen Polygon's relationships with its customers and employees, but make it a stronger company focused only on the unique expertise that Polygon has become known for.

"This is an exciting time for all of us at Polygon," he said. "This renewed focus will underscore our commitment to always delivering quick response, absolute reliability and outstanding results.

About Polygon Group

Founded in 1955 as part of Munters Corporation, Polygon Group is a pioneer and industry leader in the world of drying technology and engineered temporary climate solutions. The company established the use of desiccant dehumidification more than 25 years ago and has continued to advance the industry with the latest technology and the most energy efficient dehumidification and temperature control equipment available.
